

SUPERHERO – ADA LOVELACE

Ada Lovelace (1815-1852) This British mathematician and writer was known for her work on the Analytical Engine, a computer-like machine by Charles Babbage. Publishing the first algorithm intended for such a machine, she was one of the first computer programmers, suggesting that the computer had applications beyond mere calculating. With her high educational and social status, she was fortunate to meet famous scientists and authors, which led to her breakthrough in the computing machine. It's thanks to her that we have such great computers.
